INDUSTRIES Countertops

WHAT YOU SHOULD KNOW ABOUT VT FINE LAMINATE COUNTERTOPS

HISTORY

From modest beginnings in 1956, VT Industries has grown into the leader in the postformed laminate countertop industry. You'll find our countertops at the best kitchen and bath dealers across North America, as well as in America's two largest home improvement centers.

MANUFACTURING

With seven strategically located manufacturing complexes and more than 1 million square feet of production space, we can deliver your order faster than any other manufacturer on the continent. While incorporating technologies from around the globe, our engineers have designed some of the industry's most efficient production lines exclusively for our use.

QUALITY

The craftsmanship of every VT countertop is impeccable. Our standard 45-lb. industrial particleboard meets all HUD and governmental specifications, and is American National Standards Institute (ANSI) approved. Other substrate materials are available to meet additional requirements, including environmental specifications. Our PVA glue line provides the strongest possible bond between the particleboard and the laminate.

CUSTOMER CARE

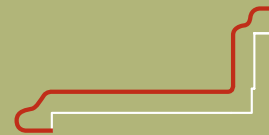

Whether you use *VTonline*® or our toll-free number, your order is received by one of our customer service centers that provide you with centralized customer care by our highly trained professionals. VT Industries consistently ranks highest in our category for on-time and accurate shipments.

At VT, we rely on our network of highly skilled fabricators and installers located across the country to ensure that our countertops are installed to last. In fact, our colleagues are so professional, we call them the VT PRO Team. For information on our network, please call us at 1.800.827.1615.

VALENCIA

Full Wrap Ogee

- Dramatic, graceful contoured slope
- Full-wrap edge design for classic sophistication

BARCELONA

Contemporary Ogee

- Striking edge contours add distinction and flair
- Double-waterfall edge is perfect for classic and modern designs

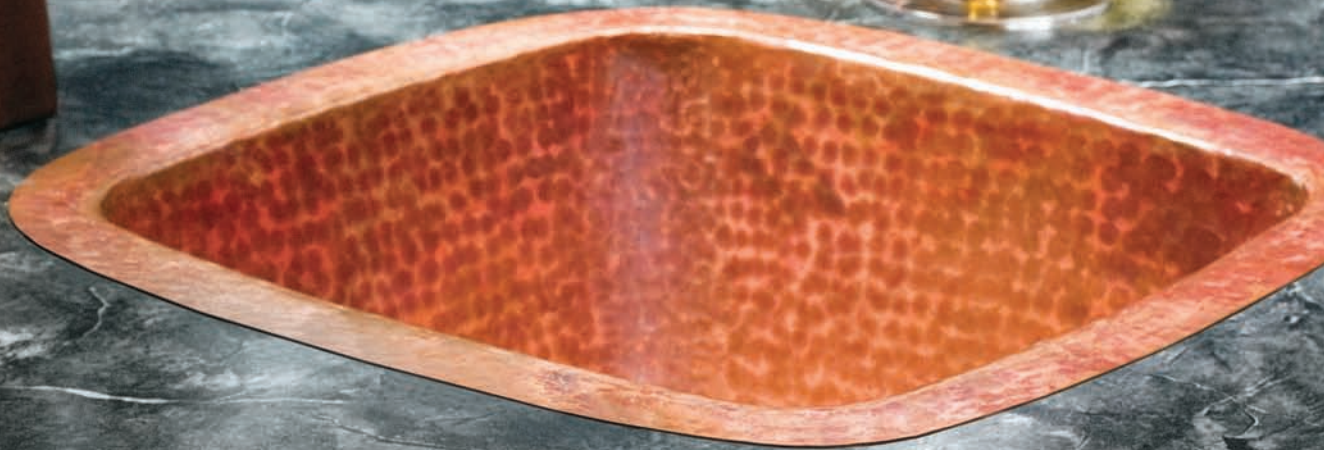

GENEVA

Modern Drop Ogee

- Clean, attractive edge contour lines
- Subtle modern drop ogee emanates understated class

FUTURA

Double Radius Edge

- Contemporary, postformed double-radius edge can provide the "slab" effect of solid surface or stone
- Attractive focal point in kitchens and baths

WHAT YOUR CUSTOMERS SHOULD KNOW ABOUT VT FINE LAMINATE COUNTERTOPS

VARIETY

Many of your customers probably still refer to laminate countertops as "Formica". Several major companies now manufacture laminate, including Formica, Wilsonart and Nevamar, and VT works with all of them. We also offer ten unique profiles, so we can supply your customers with literally thousands of possibilities to choose from.

VERSATILITY

Your customers may come into your shop wanting something for their kitchen or bath. But VT countertops can be used in every room of the house. They're perfect for workspaces, laundry rooms, garages, desktops and children's rooms. And best of all, they're a fraction of the cost of granite or stone. Which is also great news for your commercial and light industrial clients.

VALUE

When it comes to a quality countertop, what's underneath your laminate is just as important. With VT you can assure your customers that their countertop is built to last. Our countertops are also extremely cost-effective when compared to other popular materials. Some laminates are even textured to look and feel like stone, granite or brushed aluminum. Because our countertops are formed as a single piece with a rolled front edge and an integral backsplash, there are no seams to collect dirt and grime, which means less bacterial and microbial growth for a cleaner, healthier surface. And don't forget that they never need to be resealed or polished like most stone and solid surface products.

FUTURA
Tumbled Roca 4835-38, Wilsonart

NOVA

180° Wrap Edge

- Sleek styling of a 180° postformed edge
- Perfect for customers looking for a rounder profile
- Popular choice for schools and other commercial applications

TEMPO

Waterfall Edge

- Classic, postformed waterfall edge
- Radius on waterfall edge and backsplash provides a contemporary look

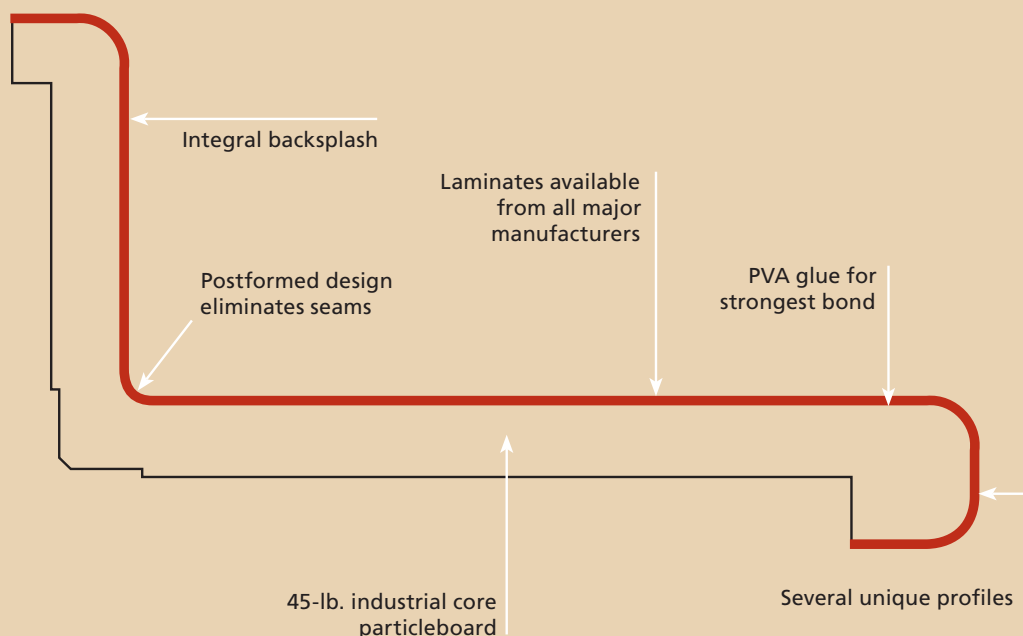

WHAT YOU SHOULD KNOW ABOUT POSTFORMED COUNTERTOPS

DEFINITION OF POSTFORMED

Postformed countertops are prefabricated countertops formed as a single piece from the backsplash to the front edge. Laminate is “wrapped” around the core material — from the curved backsplash, to the cove and then over the front edge — to provide a seamless surface.

SEAMLESS COUNTERTOPS:

- Help avoid the collection of dirt and grime
- Provide the appearance of granite, stone or marble
- Allow easy maintenance with no polishing or resealing needed
- Are easy to install for new construction or remodel projects
- Offer your builder or fabricator the ability to create custom pieces that complement postformed pieces

CAPRICE

No Drip Edge

- Eye-catching design with no-drip front edge
- Notch particleboard riser on no-drip edge strengthens the area and prevents a gap from appearing between the particleboard and the laminate

FLEETWOOD II

Solid Wood Edge

- Unique wood veneer edge on a countertop with a postformed laminate cove
- Match or complement cabinetry in a choice of wood species — maple, cherry, hickory or oak
- Also available with square profile for custom shaping
- Three factory-milled profiles available:

Ogee

Bevel

Ovolo

REGAL

Bevel Edge

- Simple — yet elegant — 45° bevel on both the front nose and backsplash edges
- Accent the bevel with a contrasting color for added interest

CLASSIC

Square Edge

- Traditional self-edge
- Added benefit of a postformed cover

WHAT YOU SHOULD KNOW ABOUT VT INDUSTRIES AND THE ENVIRONMENT

PRACTICE SUSTAINABILITY WITH EQcountertops

Environmental sustainability has always been important in our manufacturing process, and when it comes to construction of any kind, environmental concerns are more important than ever. VT Industries is proud to offer EQcountertops and have taken our commitment to the next level by achieving GREENGUARD for Children & SchoolsSM Certification. Not only are they low-emitting, but they are aesthetically appealing and can help your project earn Leadership in Energy and Environmental Design (LEED®) points for your project.

LEED POINTS

At VT Industries we're constantly adapting our manufacturing techniques to ensure environmental responsibility. Consistent with this strategy, EQcountertops are manufactured using SkyblendTM particleboard, consisting of 100% pre-consumer recycled wood fiber particleboard made with no added urea-formaldehyde, contributing to LEED points for recycled content, regional materials and low-emitting materials. Skyblend is tinted blue for easy identification and is as durable as any substrate product.

LOW EMISSIONS

EQcountertops low-emitting materials contribute to improved occupant health and quality of life through improved indoor air. Biodegradable, water-based adhesives and no added urea-formaldehyde substrates eliminate harmful Volatile Organic Compounds (VOCs). In addition, GREENGUARD certified laminates are used from all major brands, enhancing EQcountertops ability to provide high quality indoor air.

GREENGUARD FOR CHILDREN & SCHOOLS

Our EQcountertops are thoroughly tested quarterly for chemical emissions by The GREENGUARD Environmental Institute (GEI). GEI is an industry-independent, non-profit organization that oversees the GREENGUARD Certification Program, establishing acceptable indoor air standards for indoor products, environments, and buildings. GREENGUARD certified products meet the standards of numerous sustainable building initiatives including - Leadership in Energy and Environmental Design (LEED), National Association of Home Builders (NAHB) and Collaborative for High Performance Schools (CHPS).
