Revision 00

---

Applies to Flush doors

## **HARDWARE RESTRICTIONS FOR 1-3/8" THICK DOORS**

Mortised hardware such as locks, flush bolts and concealed closers with faceplates wider than 1" are not allowed in 1-3/8" thick doors.

Mortising for hardware with face plates wider than 1" in 1-3/8" thick doors removes too much material from the edge of the door which weakens the door and causes chip out of material, especially in -3 (HPDL edge) doors.
